Product name:	Product code:
Four Chamber Multi Organ Bath System	CMI-NP-0002

Description

A four-station organ bath system with water jacketed glass chambers and a digital temperature controller for simultaneous isolated tissue studies in pharmacology research and teaching.

Technical specification

Construction	Stainless steel cabinet, borosilicate glass chambers

Standard Accessories

- Tissue hooks set
- Carbogen tubing

The unit holds four tissue chambers in a single frame with a built-in circulating heater. It supports parallel experiments on isolated uterus, intestine, aorta or vas deferens strips with isometric or isotonic recording.

Features

- Four independent tissue chambers
- Built-in water bath with digital PID controller
- Individual aeration flow regulators
- Stainless steel tissue hooks and force transducer mounts

Technical Specifications

Number of chambers	4
Chamber volume	10 / 20 / 25 ml (interchangeable)
Temperature range	Ambient + 5 to 50 deg C
Temperature accuracy	+/- 0.2 deg C
Controller	Digital PID with LED display
Power supply	230 V AC, 50 Hz
