

Product name:
Diagnosing Gene Defects

Product code:
CIVIL-ELO-128-0005

Description

Diagnosing Gene Defects

Technical specification

They'll search for changes in a non-human DNA sample to diagnose this hereditary blood disease.

Your students will use agarose gel electrophoresis to study sickle cell anaemia - a painful and ultimately fatal condition resulting from a genetic mutation which alters the body's haemoglobin.

In the process, They'll learn about genes and how genetic mutations can cause disease. Class size - 40 students
