

Product name:
Force Table

Product code:
CIVIL-FOC-114-0006

Description

Force Table

Technical specification

The durable polymer tabletop carries an angle scale with 0.5° divisions, marked every 10° in both rotation directions. With a large, 40cm diameter tabletop, 3cm thick support column and heavy cast base with leveling screws, this force table is suitable for use in any basic physics lab. The slotted masses have a keyhole pattern which secures them during adjustments. The cords include split rings for easy connection, allowing three-force and four-force equilibrium arrangements to be rapidly constructed. Four sets of slotted masses, each 150g x 5g including hangers, are supplied with the table. Includes spirit level. The table is 41cm high. Four tableclamp pulleys are included, each has a circular cut-out with a fiducial mark for accurate angle measurements.
