Product name:	Product code:
Rotarod Apparatus for Mice	CMI-NP-0186

Description

A rotarod apparatus with rotating rod and fall detection used to test motor coordination and neurotoxicity of drugs in mice and rats.

Technical specification

Power supply	230 V AC, 50 Hz

Standard Accessories

- Rod for rats
- Lane dividers

The animal walks on the rotating rod and the latency to fall is recorded. It is used in screening of muscle relaxants, anticonvulsants and neurotoxic compounds.
