

Product name:
Hall Effect Apparatus

Product code:
CIVIL-ELC-115-0021

Description

Hall Effect Apparatus

Technical specification

Hall Effect kit consists of the power unit and the Hall probe. Other equipment required for magnetic experiments include a pair of Helmholtz coils and an Air Cored Solenoid. The power supply provides a special constant current supply (current remains exact even though the load might alter resistance due to heating) for the solenoids. The unit the Hall Effect probe.

Ranges are 0-2 A (const.current with up to 25V.DC.available), and 2x range 0-10mT / 0-100mT.

Meter can be switched from output Amps to monitor output Volts if desired.
