NAUGRA®

Product name:	Product code:
Rebar Locator and Cover Meter	CMI-NP-0251

Description

A handheld electromagnetic instrument that locates reinforcing bars in concrete and measures cover depth and bar diameter. Used for checking cover before and after concreting.

Technical specification

Battery	Rechargeable
Standard	BS 1881 Part 204
Weight	Approx. 1.2 kg

Standard Accessories

- Probe
- Cable
- Carry case

The probe produces a magnetic field that changes near steel bars. The display shows bar position and cover. It is used for quality checks and before drilling or coring.
