NAUGRA®

Product name:	Product code:
DC Motor Speed Control Trainer	CMI-NP-0270

Description

A trainer to control the speed of a DC motor by armature voltage and field control. Used in electrical drives labs. Features include armature and field control, thyristor converter and speed and current meters.

Technical specification

Protection	Fuse, overload
Experiments	Speed control, loading

Standard Accessories

- Patch cords
- Manual

A thyristor converter feeds the motor with variable voltage. Students study speed regulation and loading.

Features

- Armature and field control
- Thyristor converter
- Speed and current meters
- Motor and brake included
- Protection circuits

Technical Specifications

Motor	0.5 kW DC shunt
Converter	Single phase half controlled
Speed range	0 to 1500 rpm
Meters	Digital
Load	Mechanical brake
Supply	230 V AC 50 Hz
