Product name:	Product code:
Modular Flexible Production System	CIVIL-MFP-177-0001

Description

Modular Flexible Production System

Technical specification

Overview

The modular flexible production system mainly consists of five stations: distribution unit, testing unit, processing unit, robot handling unit, sorting and storage unit.

This manufacturing system increased the servo control method, and uses servo control in both the 3rd station and 5th station.

The modular production system software is controlled by MCGS industrial configuration monitoring software, which monitors the operation status and operation process of the equipment.

Technical parameters of the modular flexible production system

Total dimension: 3000×800×1420mm

Input power: single-phase, three-wire AC220V±10% 50Hz/60Hz

Capacity: ? 2KVA

Optional components

Computer, computer table

PLC module

Air compressor
