Product name:	Product code:
Cloud and Pour Point Test Apparatus	CMI-NP-1540

Description

Cloud and Pour Point Test Apparatus is a refrigerated bath apparatus with test jars and thermometers used to find the cloud and pour point of petroleum oils. It is used for determining low-temperature flow properties of lubricants and fuels to ASTM D97.

Technical specification

Bath Sections	3 stage
Bath Medium	Alcohol
Controller	Digital
Sensor	PT-100
Compressor	1/4 hp
Power Supply	230 V AC, 50 Hz, single phase

Cloud and Pour Point Test Apparatus is a refrigerated bath apparatus with test jars and thermometers used to find the cloud and pour point of petroleum oils. It is designed for determining low-temperature flow properties of lubricants and fuels as per IS 1448 and ASTM D97. Key highlights include multi-jacket cooling bath, digital temperature indicator and test jars with cork and thermometer holders.

Features

- Multi-jacket cooling bath
- Digital temperature indicator
- Test jars with cork and thermometer holders
- Refrigeration unit with thermostat
- Stainless steel body

Technical Specifications

Temperature Range	Ambient to -40 deg C
Test Jar Size	Standard
