Product name:	Product code:
Percolation Extraction Column	CMI-NP-1553

Description

Percolation Extraction Column is a vertical percolator with solvent reservoir and collection vessel for extracting soluble matter from a solid bed. It is used for carrying out percolation extraction and plotting concentration against time.

Technical specification

Outlet	PTFE needle valve
Material	Glass
Power Supply	230 V AC, 50 Hz, single phase

Percolation Extraction Column is a vertical percolator with solvent reservoir and collection vessel for extracting soluble matter from a solid bed. It is designed for carrying out percolation extraction and plotting concentration against time. Key highlights include jacketed percolation column, constant head solvent reservoir and adjustable outlet valve.

Features

- Jacketed percolation column
- Constant head solvent reservoir
- Adjustable outlet valve
- Collection flasks with graduations
- Rigid support stand

Technical Specifications

Column Volume	2 litre
Column Diameter	60 mm
Reservoir	5 litre
Temperature	Ambient to 60 deg C
