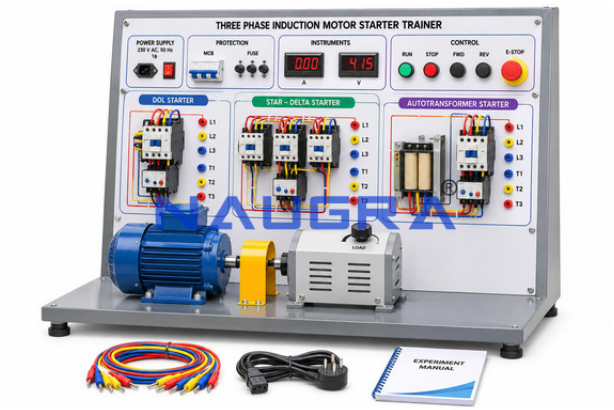
Product name:	Product code:
Three Phase Induction Motor Starter Trainer	CMI-NP-1750



Description

Three Phase Induction Motor Starter Trainer is a trainer demonstrating DOL, star-delta and auto-transformer starting of a three phase induction motor. It is used for hands-on training in the drive, control and characteristics of electric motors.

Technical specification

Construction	Powder-coated MS enclosure

Standard Accessories

- Patch cord set
- Experiment manual
- Mains cord

The Three Phase Induction Motor Starter Trainer is a trainer demonstrating DOL, star-delta and auto-transformer starting of a three phase induction motor. It is designed for hands-on training in the drive, control and characteristics of electric motors.

Features

- Overload and short-circuit protection built in
- Compact bench-top unit suitable for group practicals
- Manual with circuit diagrams and observation tables
- Complete experiments on speed, torque and direction control

Technical Specifications

Motor	415 V AC, 0.75 kW
Starters	DOL, star-delta, autotransformer
Instruments	Digital ammeter and voltmeter
Power supply	230 V AC, 50 Hz, single phase
Protection	MCB and fuse
