Product name:	Product code:
Transformer and Rectifier Circuit Training Panel	CMI-NP-1762

Description

Transformer and Rectifier Circuit Training Panel is a trainer for single phase and three phase transformer connections with diode rectifier circuits.

Technical specification

Frame	Powder-coated MS with aluminium panel

Standard Accessories

- Patch cord set
- Connecting leads
- Experiment manual
- Mains cord

The Transformer and Rectifier Circuit Training Panel is a trainer for single phase and three phase transformer connections with diode rectifier circuits. It is designed for comprehensive training in electrical machines, wiring, protection and control circuits.

Features

- Shrouded 4 mm safety terminals throughout
- Bench or table mounting with trolley option
- Detailed manual with wiring diagrams
- Modular layout with plug-in circuit modules

Technical Specifications

Transformer	1 kVA, 230/115 V tapped
Rectifier	Single and three phase bridge
Instruments	Digital voltmeter and ammeter
Power supply	415 V AC, 3 phase, 50 Hz
Protection	ELCB, MCB and thermal overload
