Product name:	Product code:
Fibre Optic Communication Training System	CMI-NP-1773

Description

Fibre Optic Communication Training System is a system with LED transmitter, plastic fibre link and receiver to study analogue and digital fibre optic transmission.

Technical specification

Light source	LED and diode laser < 1 mW

Standard Accessories

- Lens set
- Fibre cable
- Experiment manual

The Fibre Optic Communication Training System is a system with LED transmitter, plastic fibre link and receiver to study analogue and digital fibre optic transmission. It is designed for training in opto-electronic components, light-based measurement and optical devices combined with mechatronic control.

Features

- Optical bench with movable carriers
- Combines optics with sensors and actuators
- Suitable for optics, photonics and mechatronics courses
- Safe low-power laser and LED sources

Technical Specifications

Fibre	POF 1 mm, 5 m
Wavelength	660 nm
Modes	Analogue and digital
Supply	230 V AC, 50 Hz, single phase
Optical bench	1000 mm rail
