Product name:	Product code:
PCB Exposure and Developing Combined Unit	CMI-NP-1800

Description

PCB Exposure and Developing Combined Unit is a combined bench unit with UV exposure and spray developing trays for photo-resist PCB processing.

Technical specification

Construction	Powder-coated MS with acrylic window

Standard Accessories

- Spare UV tube
- Pressure frame
- Mains cord

The PCB Exposure and Developing Combined Unit is a combined bench unit with UV exposure and spray developing trays for photo-resist PCB processing. It is designed for exposing photosensitive PCB laminates to UV light when making prototype printed circuit boards.

Features

- Vacuum or pressure frame keeps film in contact
- Safety interlock on lid opening
- Compact and suitable for lab and workshop use
- Even UV exposure across the full board area

Technical Specifications

Exposure area	A4
Developer tray	300 x 250 mm
Heater	Bath heater 300 W
Supply	230 V AC, 50 Hz, single phase
UV source	UV-A tubes, 365 - 400 nm
