NAUGRA®

Product name:	Product code:
FET Amplifier Circuit Trainer	CMI-NP-1887

Description

FET Amplifier Circuit Trainer is a trainer for JFET and MOSFET amplifier circuits.

Technical specification

- Patch cords
- Breadboard wires
- Manual

The FET Amplifier Circuit Trainer is a trainer for JFET and MOSFET amplifier circuits. It is designed for building and testing analogue circuits with op-amps, amplifiers, oscillators and power supplies.

Features

- Protected outputs with fuses
- Portable carry case design
- Experiment manual with circuit diagrams
- Built-in regulated power supplies and function generator

Technical Specifications

Devices	BFW10, IRF
Bias	Fixed and self
Gain	Switch selectable
Supply	230 V AC, 50 Hz, single phase
DC outputs	+/- 12 V, +5 V
Case	ABS or powder-coated enclosure

Standard Accessories
