Product name:	Product code:
Serological Thermostatic Water Bath	CMI-NP-0234

Description

A thermostatically controlled water bath used for incubation of samples, serological tests and warming of reagents. Used in clinical, microbiology and biochemistry labs. Features include stainless steel tank, thermostatic temperature control and lid with condensation guard.

Technical specification

Material	SS 304 inside, powder coated outside
Heater	1 kW
Display	Digital
Supply	230 V AC 50 Hz

Standard Accessories

- Tube rack
- Lid

The stainless steel tank holds water heated by an element and controlled by a thermostat. The cover reduces evaporation and heat loss. It is a basic incubation tool in diagnostic and teaching laboratories.
