Product name:	Product code:
Double Distillation Water Plant	CMI-NP-0238

Description

A two stage borosilicate glass distillation unit giving high purity double distilled water for analytical work. Used in chemistry, pharmacy and research labs. Features include borosilicate glass boilers and condensers, two stage distillation and automatic water level control.

Technical specification

Cooling water	Approx. 30 litres per hour
Mounting	Table top
Supply	230 V AC 50 Hz
Storage	5 litre bottle

Standard Accessories

- Storage bottle
- Tubing set

Water is distilled twice in two boilers to remove most dissolved solids and organic matter. The glass construction avoids metal contamination in the product.

Features

- Borosilicate glass boilers and condensers
- Two stage distillation
- Automatic water level control
- Safety cut off on water failure
- Low conductivity output

Technical Specifications

Output	2 litres per hour
Boilers	2 nos, 3.3 borosilicate glass
Heater	2.5 kW
Conductivity	Less than 2 microsiemens per cm
