Product name:	Product code:
Training Set for Security Alarm and Monitoring System	CIVIL-BAT-160-0005

Description

Training Set for Security Alarm and Monitoring System

Technical specification

Training content

1. Device and wiring cognition
2. Camera lens debugging
3. System fortify, withdraw a garrison processing
4. Hard disk videotape operation
5. System fault test and manage
6. Digital monitoring network

General introduction to the training set for security alarm and monitoring system

The security alarm and monitoring system is comprised of the security alarm and closed-circuit television monitoring system. The security alarm system safety technology is one of the most important security strategies, widely used in the warehouse, banking, insurance, office buildings, residential structures, and applications. Closed-circuit television monitoring systems allow for constant monitoring for maximum security.

The security alarm monitoring system training device is a comprehensive training device that uses the most advanced technology to utilize video cameras and hard disks to capture and maintain video data that can be viewed at any time. It features an active or passive infrared detector as well.

Features of the training set for security alarm and monitoring system

1, The LONWORKS fieldbus is advanced technology that has many applications.
2, Advanced monitoring equipment: video capture card, a variety of types of cameras and LON controller, etc.

Technical parameter of the training set for security alarm and monitoring system

1. Input power: AC220V ?15% 50Hz
2. Environment temperature:-20? ?+45 ?
3. Capacity: 4. Dimension: 1500mm*700mm*1580mm
5. Security protection: with leakage automatic protection device.
