Product name:	Product code:
Three Phase Power Measurement Training Set	CMI-NP-1064

Description

A set for measuring power, power factor and phase sequence in three phase circuits with wattmeters and a load bank.

Technical specification

Panel	Steel
Experiments	Power, PF and phase sequence
Power supply	230 V AC, 50 Hz

Students use the two wattmeter method and study balanced and unbalanced loads.

Features

- Three phase load bank
- Wattmeters and power factor meter
- Phase sequence indicator
- Voltmeters and ammeters
- Selector switches
- Wiring panel

Technical Specifications

Supply	415 V AC 3 phase
Wattmeters	2 nos, digital
Load	Resistive, inductive, capacitive
Meters	V, A, W, PF
Method	Two wattmeter
Protection	MCB
