Product name:	Product code:
High Voltage AC Test Transformer Set	CMI-NP-1275

Description

Test set with a high voltage transformer and control desk for demonstrating dielectric tests and breakdown of insulating materials in power system laboratories. Key highlights include oil filled test transformer and control desk with variac.

Technical specification

Measurement	Capacitive divider
Interlock	Earthing rod

Standard Accessories

- Earthing rod
- Manual

Test set with a high voltage transformer and control desk for demonstrating dielectric tests and breakdown of insulating materials in power system laboratories. Key highlights include oil filled test transformer and control desk with variac.

Features

- Oil filled test transformer
- Control desk with variac
- Overload and trip protection
- Measuring divider
- Safety interlock

Technical Specifications

Supply	230 V AC, 50 Hz, single phase
Output	0-100 kV AC
Rating	5 kVA
Control	0-230 V variac
Protection	Overcurrent trip
