Product name:	Product code:
CAM Software Package for CNC Programming	CMI-NP-1561

Description

CAM Software Package for CNC Programming is a computer aided manufacturing software that generates tool paths and G-code for milling and turning. It is used for creating and simulating CNC programs from CAD models.

Technical specification

Operating System	Windows 10 or 11
Delivery	Installation media and key

CAM Software Package for CNC Programming is a computer aided manufacturing software that generates tool paths and G-code for milling and turning. It is designed for creating and simulating CNC programs from CAD models. Key highlights include 2D and 3D milling tool paths, turning and drilling cycles and tool path simulation and collision check.

Features

- 2D and 3D milling tool paths
- Turning and drilling cycles
- Tool path simulation and collision check
- Post processors for common controllers
- Tool and material library

Technical Specifications

Licence Type	Network, 20 seats
Operations	2.5D and 3D milling, turning
Output	G-code and M-code
Simulation	Solid verification
