Product name:	Product code:
Modular Production Station Distributing Module	CMI-NP-1731

Description

Modular Production Station Distributing Module is a station with a magazine and a pneumatic stack feeder that separates workpieces and hands them to a transfer unit. It is used for teaching workpiece feeding and separation in modular production lines.

Technical specification

Sensors	Reed, optical
Air Supply	6 bar
Control Voltage	24 V DC
Base	Aluminium profile

Modular Production Station Distributing Module is a station with a magazine and a pneumatic stack feeder that separates workpieces and hands them to a transfer unit. It is designed for teaching workpiece feeding and separation in modular production lines. Key highlights include gravity magazine for cylindrical workpieces, pneumatic separator and pusher and reed switch and optical sensors.

Features

- Gravity magazine for cylindrical workpieces
- Pneumatic separator and pusher
- Reed switch and optical sensors
- Sensor to detect empty magazine
- Aluminium profile base plate

Technical Specifications

Magazine Capacity	8 workpieces
Cylinder Type	Double acting, 16 mm bore
