Product name:	Product code:
Modular Production Station Testing Module	CMI-NP-1735

Description

Modular Production Station Testing Module is a station which checks the workpiece colour, material and height before sorting. It is used for teaching inspection stage sensing in modular production.

Technical specification

Air Supply	6 bar
Interface	I/O terminal

Modular Production Station Testing Module is a station which checks the workpiece colour, material and height before sorting. It is designed for teaching inspection stage sensing in modular production. Key highlights include inductive, capacitive and colour sensors, analog height sensor and pneumatic lift cylinder.

Features

- Inductive, capacitive and colour sensors
- Analog height sensor
- Pneumatic lift cylinder
- Signal terminal to PLC
- Aluminium base plate

Technical Specifications

Sensors	Inductive, capacitive, optical, analog
Lift Cylinder	Double acting
Height Resolution	0.1 mm
Control Voltage	24 V DC
