Product name:	Product code:
Three Phase Motor Fault Finding Training Device	CMI-NP-1761

Description

Three Phase Motor Fault Finding Training Device is a trainer with switchable faults in three phase motor power and control circuits for troubleshooting practice.

Technical specification

Frame	Powder-coated MS with aluminium panel

Standard Accessories

- Patch cord set
- Connecting leads
- Experiment manual
- Mains cord

The Three Phase Motor Fault Finding Training Device is a trainer with switchable faults in three phase motor power and control circuits for troubleshooting practice. It is designed for comprehensive training in electrical machines, wiring, protection and control circuits.

Features

- Covers wiring, motor control and protection experiments
- Fault insertion switches for troubleshooting practice
- Shrouded 4 mm safety terminals throughout
- Bench or table mounting with trolley option

Technical Specifications

Fault points	12 switchable faults
Motor	0.37 kW, 415 V
Test points	Multimeter ready
Power supply	415 V AC, 3 phase, 50 Hz
Protection	ELCB, MCB and thermal overload
