NAUGRA®

Product name:	Product code:
Optical Rotational Speed Measurement Training System	CMI-NP-1779

Description

Optical Rotational Speed Measurement Training System is a system measuring motor speed using reflective and slotted optical sensors with a tachometer display.

Technical specification

Light source	LED and diode laser < 1 mW

Standard Accessories

- Lens set
- Fibre cable
- Experiment manual

The Optical Rotational Speed Measurement Training System is a system measuring motor speed using reflective and slotted optical sensors with a tachometer display. It is designed for training in opto-electronic components, light-based measurement and optical devices combined with mechatronic control.

Features

- Suitable for optics, photonics and mechatronics courses
- Safe low-power laser and LED sources
- Digital readouts for easy data recording
- Optical bench with movable carriers

Technical Specifications

Speed range	0 - 6000 rpm
Sensors	Reflective and slotted
Motor	24 V DC
Supply	230 V AC, 50 Hz, single phase
Optical bench	1000 mm rail
