Product name:	Product code:
Photoelectric Detection and Counting Training System	CMI-NP-1781

Description

Photoelectric Detection and Counting Training System is a trainer using photoelectric switches on a belt for object detection and counting.

Technical specification

Light source	LED and diode laser < 1 mW

Standard Accessories

- Lens set
- Fibre cable
- Experiment manual

The Photoelectric Detection and Counting Training System is a trainer using photoelectric switches on a belt for object detection and counting. It is designed for training in opto-electronic components, light-based measurement and optical devices combined with mechatronic control.

Features

- Safe low-power laser and LED sources
- Digital readouts for easy data recording
- Optical bench with movable carriers
- Combines optics with sensors and actuators

Technical Specifications

Belt	600 mm, 24 V DC
Sensors	3 photoelectric types
Counter	LCD preset counter
Supply	230 V AC, 50 Hz, single phase
Optical bench	1000 mm rail
