Product name:	Product code:
PLC Traffic Light Control Training Device	CMI-NP-1841

Description

PLC Traffic Light Control Training Device is a PLC trainer with a road junction model for sequential traffic signal programming.

Technical specification

Communication	Ethernet and RS485

Standard Accessories

- Programming cable
- Patch cords
- Software disc

The PLC Traffic Light Control Training Device is a PLC trainer with a road junction model for sequential traffic signal programming. It is designed for designing, programming and testing PLC based control systems for industrial automation tasks.

Features

- Simulation modules for lifts, traffic and batch process
- Programming in ladder, FBD and structured text
- Safety sockets and short-circuit protection
- Suitable for PLC, HMI and SCADA practice

Technical Specifications

Junction	4-way, LED signals
Pedestrian	Push button crossing
Modes	Day, night, flash
Supply	230 V AC, 50 Hz, single phase
PLC I/O	24 DI / 16 DO
