Product name:	Product code:
Seal Dye Penetration Test Kit for Flexible Packs	CMI-IND-0148

Description

Kit with dye solution and applicators for finding channel leaks in pouch seals by capillary penetration. Used for pouch and sachet seal inspection at converters and fillers.

Technical specification

- Gloves

A coloured dye is introduced to the inside of the seal area, left for a short time and the seal examined for dye traces. Pinholes and channels become visible without special equipment. It is a quick method for both production and complaint investigation.
