Product name:	Product code:
Adhesive Film Applicator with Vacuum Plate	CMI-IND-0151

Description

Bar or blade applicator on a vacuum-hold glass plate used to cast uniform wet films of adhesives, coatings and primers. Used to prepare consistent specimens for tack, peel and cure tests.

Technical specification

- Rubber hose

The vacuum plate holds the substrate flat while the applicator spreads adhesive to a set wet thickness. Uniform films make test results comparable between formulations. An adjustable micrometer applicator covers thicknesses from 10 to 3000 um.

Features

- Micrometer adjustable film applicator
- Vacuum plate 200 x 300 mm
- Wet film thickness 10 - 3000 um
- Stainless steel construction
- Easy clean surfaces

Technical Specifications

Film Width	100 mm
Wet Film Thickness	10 - 3000 um
Plate Size	200 x 300 mm
Vacuum Source	Integrated pump 230 V
Applicator Material	Stainless steel
Standards	ASTM D823, ISO 1520 (sample preparation)

Standard Accessories

- Wire wound rods set
