Product name:	Product code:
Leather Softness Tester with Digital Display	CMI-IND-0376

Description

Pressure indentation gauge that measures softness of leather as depression depth. Used for handfeel grading of garment and upholstery leather. The result supports grading and customer approval of upholstery and garments.

Technical specification

- Probe

A ring and plunger press on the leather with a defined load and the resulting depth is shown on the display in mm. A lower value indicates stiffer leather.

Features

- Digital readout
- Ring 25 mm
- Calibration block
- Handheld probe
- Memory

Technical Specifications

Range	0 to 10 mm
Resolution	0.01 mm
Ring diameter	25 mm
Plunger	5 mm
Load	100 g
Accuracy	+/-0.05 mm
Standards	IUP 36, ISO 17235

Standard Accessories

- Calibration plate
