Product name:	Product code:
Tile Flexural Testing Machine	Concrete0019

Description

Tile Flexural Testing Machine

Technical specification

Tile Flexural Testing Machine Tile Flexural Testing Machine from Civil Mechanical Laboratory India

Tile Flexure Testing Machine is used to determine the flexural strength of clay roofing tiles and cement concrete flooring tiles. Tile Flexural Testing Machine for Civil Engineering from Laboratory Equipment Manufacturers India - We are one of the leading manufacturers of Tile Flexure Testing Machines. Our machines are manufactured using best raw materials to ensure good functionality and durability.

Functionality :
The Tile Flexure Testing Machine is a double lever loading machine where load is placed by a flow of lead metal that automatically stops as the sample breaks. The sample is mounted between rollers which are 40mm or 12mm in dia. Bearing rollers can be placed at center distances of 150, 200 or 270mm. The unit comes equipped with a 20 Kg lead metal
