Product name:	Product code:
Digital-Analog Training System	DAC0001

Description

Digital-Analog Training System

Technical specification

Design of this Digital-Analog Training System has been developed to meet various research and development laboratories where digital and analog training programs are held. This training system is used as essential part of circuit trouble shooting course, analog circuit experimental work and basic logical circuit training procedure. It consists of instruments and sections like potentiometer, BAR display unit, LED display screen and adapter display module to name a few. Besides these, this system comprises of in built function generator, easy to dismantle breadboard and DC power supply system. We are a reliable supplier and manufacturer of Digital-Analog Training System.

Features

- Easy to handle
- Reasonable price
- Application of latest technology
- Precise design
