Product name:	Product code:
Electric Vehicle Energy Management Training Equipment	AUT0-0007

Description

Electric Vehicle Energy Management Training Equipment

Technical specification

Training Contents:-

Understanding electric vehicle energy management training system components and works.

The equipment is fully equipped with electric vehicle energy management system, can simulate the electric vehicle start,low speed,general driving,full speed,slow down and stop six kinds of conditions of energy flow direction and the motor running.

Specification:-

Training board using 220V AC power supply, the internal circuit transformer rectifier into 12V DC power supply, no battery, reduce the trouble of charging, 12V DC power supply has anti-short circuit function.

Operating temperature: -40?~+50?

Size:- 1,600 X 700 X 1,700 mm

The panel is equipped with ignition switch, operating condition switch, throttle pedal, gear switch, brake switch, digital tachometer, current indicator, etc.

Supplemented by light-emitting diode system for the dynamic direction of the system, also has a The analog motor is used to demonstrate the working status of the motor.
