Product name:	Product code:
CNC Milling Machine Training Device	CIVIL-MAT-45-0002

Description

CNC Milling Machine Training Device

Technical specification

The Fanuc CNC milling machine training device adopts FANUC 0i-Mate series of numerical control system. It can set electrical faults. The spindle of the CNC milling machine is driven by a variable frequency motor and the three axes linkage is controlled by an AC servo motor.

This equipment is applicable to the training and assessment of installation and maintenance electricians in advanced class, technician class and senior technician class as well as of milling machine operator in the medium, senior and technician classes.
