
NAUGRA[®]

Product name:
Respirometer

Product code:
CIVIL-BIO-135-0003

NAUGRA[®]

Description

Respirometer

Technical specification

One tube holds the organisms and has a syringe for altering the level of liquid in the manometer during set up.

NAUGRA[®]

A compact unit for comparing rates of absorption or evolution of gases by small organisms during respiration.

Civil Laboratory Equipment Manufacturers and Suppliers India Civil Lab Exports India

The other tube acts as a control thermo-barometer.

Email us at: export@civilmechanicalindia.com

CO₂ given off by the respiring organism is absorbed by potassium hydroxide in the experimental chamber resulting in a change in the level of liquid in the manometer tube.

The apparatus consists of two stoppered boiling tubes connected by three way taps to either limb of a graduated manometer.

Specification:

The apparatus consists of two stoppered boiling tube connected by three-way taps to either limb of graduated manometer.

Complete with wire baskets for supporting organisms.
