

Product Name :
Level Process Control Training System

Product Code :
CIVIL-LPC-150-0001

Description :

Level Process Control Training System

Technical Specification :

The level process control training system is composed of control cabinet and process control unit. The level process control trainer is specially offered for physical simulation of the industrial process. It is a kind of multi-function experimental facility integrating the PLC control technology, computer technology, communication technology, and automatic control technology.

Our level process control training system is particularly suitable for measuring and controlling the level of the liquid in the container. The liquid level control trainer helps to realize multiple control modes, such as system parameter identification, single loop control, etc.

Applications

The level process control training system is widely used in the process control course for undergraduate, college student, and vocational college student, as the experimental device. Apart from that, this product is applicable for the postgraduate and researcher to carry on research related to complicated control system and advanced control system.

Technical Parameters

Single-phase 3 wire 220V \pm 10% 50/60Hz

Rated Power

Emergency protection (action current \geq 30mA),
overcurrent protection, fuse protector

DC Power Supply 5A

Ambient Temperature

Relative Humidity

Overall Dimension (L \times W \times H) Control Cabinet

Overall Dimension (L \times W \times H) Process Control Unit
